

## Office 365 Challenges

Office 365 is one of the most highly utilized SaaS products in the world, also making it a highly targeted environment.

Unfortunately, in efforts to promote adoption of the cloud version of their productivity suite, Microsoft has allowed inadequate default security protections, threat detection and investigation tools.

In addition, navigating the complex and multiple dashboards, confusing licensing and rapid changes has left many administrators frustrated. Microsoft Cloud Solution Providers (CSPs) often represent that they are configuring security, however the focus is on operational deployment and basic security settings.

SecureSky provides the expertise to securely set up your Office 365 environment, and monitor any changes in this security posture 24x7x365, using API connections and PowerShell execution for on-demand detection and response.

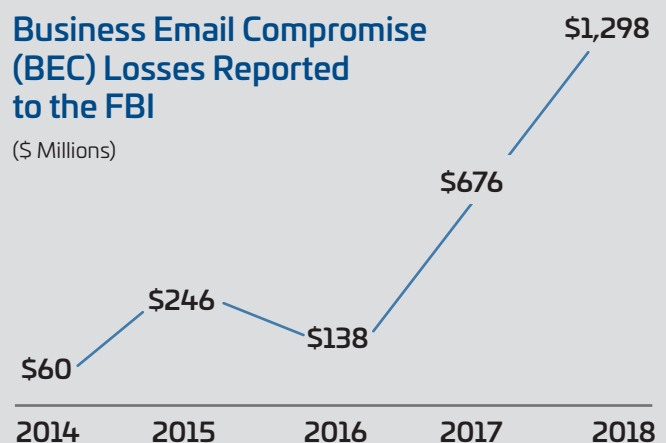

Our Office 365 experts will also proactively hunt for threats in your environment, adding an additional layer to your protective defenses.

## The Threat is Real

- » Business Email Compromise
- » Misconfiguration
- » Phishing
- » Ransomware
- » Account Attack
- » Tenant Attack
- » Endpoint Compromise

### Business Email Compromise (BEC) Losses Reported to the FBI

(\$ Millions)

## SecureSky Office 365 Solution

### Office 365 MDR Services Address Key Risks and Threats

#### Protective Controls

Hardening the environment to limit the effectiveness of attacks

- Identity and authentication
- Access and sharing
- Information and application controls
- Attack surface reduction and advanced threat protection

#### Detection Policies

Enabling appropriate policies and auditing to detect attacks

- Anti-phishing, spam, malware and safe attachment/link controls
- Data loss protection and retention
- Risky users and applications
- Advanced threat

#### Hunting

Added detection for use-cases, threat intelligence and free-form analysis

- Account and data access and additional scenarios
- Persistent and chronic threats
- Threat intelligence based lookbacks
- Indicators of malicious activity

#### Response

Action for attacks and added protective controls to prevent recurrence

- Threat ratification
- Protection optimization
- Detection tuning

### Who We Are

SecureSky delivers a complete portfolio of cloud security solutions to help organizations protect their cloud applications, services and infrastructure. Utilizing cloud-native, third-party and SecureSky patented technologies, our solutions meet the security, compliance and budget requirements of today's dynamic enterprises.

SecureSky solutions include Security Consulting, focused on identifying risk and deploying protective controls and policies and Managed Detection and Response (MDR), providing active threat detection and threat hunting, expert response and continuous protective control optimization.

Our services are supported by our Cloud Risk Protection technology and patented Active Security Protection Platform.
