

Office 365 Risk and Threat Protection Solution

Office 365 Security Challenges

Office 365 is one of the most highly utilized SaaS products in the world, also making it a highly targeted environment.

Unfortunately, in efforts to promote adoption of the cloud version of their productivity suite, Microsoft has allowed inadequate default security protections, threat detection and native investigation tools.

In addition, navigating the complex and multiple dashboards, confusing licensing and rapid changes has left many administrators frustrated. Microsoft Cloud Solution Providers (CSPs) often represent that they are configuring security, however the focus is on operational deployment and basic security settings.

SecureSky provides the expertise with a step by step process to secure your Office 365 environment and detect any changes to protective controls or threats to the environment or users.

Our additional services for Office 365 provide continuous hardening and protection of the environment and can be customized to operate within an organization's security program.

SecureSky Protects Against:

- Business Email Compromise
- Ransomware and Malware
- Phishing
- Account Attacks
- Tenant Attacks
- Endpoint Compromise
- Configuration Risk

The Threat is Real

Global annual ransomware damages predicted to reach
\$11.5 billion
in 2019*

\$11.5 billion

*

A ransomware attack predicted every
14 seconds
by the end of 2019*

\$1.3 billion of losses reported from Business Email Compromise (BEC) to the FBI in 2018

*According to Cybersecurity Ventures

Office 365 Risk and Threat Protection Solution

SecureSky's Office 365 Risk and Threat Protection Solution Suite

- O365 Security and Compliance Assessment, with detailed remediation guidance on protecting O365
- SecureSky Active Protection Platform
 - Risk and threat management dashboards
 - Continuous validation and automated security policy and compliance enforcement
 - Advanced Threat Detection policies
 - One-click configuration, policy and threat remediation
 - Integrated threat intelligence to provide real-time protection against emerging threats
- Customized Managed Detection and Response (MDR) Services
 - Tier 3 and 4 intrusion analysts, forensic investigators and engineers to support your SOC, NOC or Security personnel
 - Threat hunting
 - Expert analysis of your threat landscape to identify and deploy protective hardening recommendations

SecureSky's Additional Services to Support Office 365

- Deployment and enablement of additional Microsoft/O365 security and compliance features or tools such as Windows Defender or Azure Sentinel
- Project-based remediation assistance if MDR Services are not in scope

Who We Are

SecureSky delivers a complete portfolio of cloud security and compliance solutions to help organizations secure their cloud applications, services and environments.

The SecureSky Active Protection Platform delivers full visibility and real-time response to current and emerging threats across the entire cloud stack.
